ATS – List of Services

Aerosol Technology Training:

ATS offers customized on-site technical training in: Aerosol Technology (basic through advanced seminars), Aerosol Valve Systems, Product Development, VOC Reduction Strategies, Aerosol Product Quality Control, and, Aerosol Laboratory Design. 2009 seminars are listed on page 3.

Product & Package Development:

ATS partners with your in-house technical team to provide assistance in all phases of aerosol product development. Our support ranges from concept ideation, to prototype development, through full production. We can also act as your representative at an aerosol co-packer.

Aerosol Safety Auditing:

ATS provides on-site audits of aerosol manufacturing, warehouses (DC's), and aerosol laboratory facilities to evaluate current aerosol handling safety practices and procedures.

Product Quality Improvement & Consumer Complaint Reduction:

We will design & implement, or upgrade, Aerosol Quality Assurance Systems for your products. In addition, ATS can provide support to reduce customer complaints by investigating problems such as "poor spray" and "can does not empty" complaints.

Aerosol Co-packager Management

ATS can assist you in finding the right co-packer for your aerosol products. Services include: site audits and co-packager selection, technology transfer, development of product specific quality control quality plans, product scale-up. In addition, ATS can represent your interests at production runs, and participate in troubleshooting issues as needed.

Aerosol Lab Design:

After a site review, custom recommendations are developed for the acquisition and installation of aerosol filling equipment appropriate for your needs. ATS also provides on-site training in aerosol lab operating procedures, and safety guidelines.

Expert Witness Services:

ATS will work with your legal team to provide case review, product design analysis, failure analysis, develop technical opinions, and, participate as an expert witness in court if necessary.

Aerosol Technology Training Programs

- **ON-SITE:** For your convenience, programs are provided at your location.
- **RELEVANT:** Programs are customized to reflect your company's aerosol product lines. Also, individual modules within each program listed below can be combined to form a custom presentation to suit your specific training needs.
- **IMMEDIATELY HELPFUL:** In addition to lectures, there are question and answer periods to discuss participants' specific questions, and current technical issues.
- **COST EFFECTIVE:** One price for up to 15 participants. No employee travel expenses.

2009 PROGRAMS INCLUDE:

Aerosol Technology 101 : A basic general introduction to aerosol systems which includes: aerosol formulations, propellants, selecting the proper valve system, controlling particle size and spray geometry, aerosol container options, aerosol charging, valve crimping, and VOC issues.

Aerosol Product Development : Aerosol product design – selection, development, and testing of aerosol formulas, propellants, and packaging systems. In addition there are optional modules covering: aerosol laboratory safety, safe handling and storage of propellants, container corrosion, and product stability testing.

Aerosol Quality Assurance : Discussion of aerosol quality control systems – customized to address your specific products. Modules include: incoming, in-process & finished product inspections, failure analysis procedures for defective finished product. Also, strategies to reduce customer complaints.

Industry Training Experience:

Aerosol training seminars were presented by Mr. Chadwick at the following companies (partial list)...

SC Johnson
Falcon Safety Products
CB Fleet Company

Reckitt & Benckiser
The Dial Corporation
Bristol-Myers Squibb

Berry Plastics
Sovereign Chemicals
SATA (Southern Aerosol Technical Assn.)
Gillette
Wella (P&G)

*Call ATS today to discuss your Aerosol Technology training needs.
