Professional Skills

Dr. Paul Rosenfeld, founder and principal of RoseyFields LLC in Santa Monica, California, is an environmental chemist with more than 25 years of experience in exposure assessment, historical dose reconstruction, environmental forensics, and air-dispersion modeling. His work spans hundreds of contaminated sites across the United States, with deep expertise in asbestos and other hazardous pollutants. As a Remedial Project Manager for the U.S. Navy's BRAC Program on Treasure Island, Dr. Rosenfeld oversaw asbestos remediation in soils and friable building materials, directed environmental testing and cleanup activities, and conducted air monitoring to protect workers and nearby communities. He has also modeled asbestos emissions from serpentine road dust in California and reconstructed exposures for residents and schoolchildren.

Dr. Rosenfeld has taught environmental health and epidemiology at the University of California, Los Angeles (UCLA), and is the co-author of *The Risks of Hazardous Waste* (2011), which includes quantitative analysis of asbestos risks. He also co-authored three volumes of the *Handbook of Pollution Prevention and Cleaner Production*, covering the petroleum, wood and paper, and agrochemical industries. Over his career, he has prepared hundreds of exposure assessments, developed sampling and investigation strategies for complex multi-contaminant sites, directed multidisciplinary scientific teams, and trained remediation personnel in industrial hygiene and exposure-control practices. He has worked closely with government agencies and private clients on numerous high-profile environmental cases.

Dr. Rosenfeld is trained and certified under OSHA's Hazardous Waste Operations and Emergency Response standard, 29 C.F.R. § 1910.120 (HAZWOPER). Through this federally recognized program, he received formal instruction in hazardous-substance safety, contaminant fate and transport, exposure pathways, and OSHA regulatory compliance. His training included hazardous-site investigation protocols, respiratory protection,

air-monitoring instrumentation, personal protective equipment (PPE), decontamination procedures, emergency-response planning, chemical toxicology, and OSHA exposure standards.

Beyond asbestos, Dr. Rosenfeld has conducted exposure evaluations for diesel particulate matter, silica, benzene, pesticides, PCBs, dioxins and furans, PAHs, volatile and semi-volatile organic compounds, perfluoroalkyl substances (PFAS), and heavy metals in soil, dust, water, and air. His peer-reviewed research includes studies on diesel exhaust exposure among railroad workers, cancer risks associated with Camp Lejeune drinking water contamination, PFAS exposure among firefighters, and community health burdens from refinery fires in Richmond, California. His work routinely relies on methodologies developed by the U.S. EPA, OSHA, ATSDR, and NIOSH, and he has performed air-dispersion modeling using tools such as AERMOD, ALOHA, and BREEZE to evaluate both acute and chronic inhalation risks.

Dr. Rosenfeld has been retained by municipalities, state agencies, and plaintiff law firms nationwide, and he has testified as an expert witness in numerous cases involving environmental contamination, asbestos exposure, air emissions, and human-health risk. His testimony has been admitted in state and federal courts at both the deposition and trial stages.

Judicial Recognition of Expertise and Skills

Dr. Rosenfeld's exposure assessment and environmental forensics methodologies have been repeatedly upheld under Federal Rule of Evidence 702 and the Daubert standard in federal and state courts.

- **U.S. District Court for the District of Vermont**

Austin v. Monsanto Co. — Court upheld Dr. Rosenfeld's exposure and risk-assessment methodology, including Average Daily Dose calculations, hazard quotients, EPA default assumptions, and statistically supported upper confidence limits (UCLs), finding the approach scientifically reliable and admissible.

- **U.S. District Court for the Southern District of Texas**

Cannon v. BP Products North America, Inc. — Court relied on Dr. Rosenfeld's AERMOD-based air-dispersion modeling to delineate geographic exposure zones from refinery emissions and accepted his plume modeling and exposure methodology as scientifically reliable.

- **U.S. District Court for the District of Nebraska**

Gillett v. BNSF Railway Co. — Court found Dr. Rosenfeld qualified to offer opinions on historical diesel-exhaust exposure, environmental forensics, source attribution, and dose reconstruction, concluding his methodology was grounded in reliable scientific principles.

- **U.S. District Court for the District of Colorado**

Gonzales v. BNSF Railway Co. — Court admitted testimony based on EPA-based exposure modeling, integration of published emission factors, activity-pattern reconstruction, and cumulative-dose calculations supported by sufficient facts and data.

- **Seventeenth Judicial Circuit Court, Broward County, Florida**

Hinton v. City of Fort Lauderdale — Court denied a Daubert motion and found Dr. Rosenfeld qualified in

air modeling, environmental contamination, fate and transport, and exposure assessment.

- **Florida Fifth District Court of Appeal**

Lewis v. Norfolk Southern Railway Co. — Appellate court affirmed admissibility of Dr. Rosenfeld's environmental exposure methodology under Daubert.

- **Eleventh Judicial Circuit Court, Miami-Dade County, Florida**

Styles v. City of Miami (2025) — During Daubert proceedings involving dioxin and arsenic contamination from a municipal incinerator, the court permitted extensive testimony regarding Dr. Rosenfeld's EPA-based methodology, including RAGS risk equations, ProUCL statistical methods, and multi-consultant environmental datasets, overruling foundational objections and allowing the testimony to proceed.

Collectively, these rulings reflect a consistent judicial consensus that Dr. Rosenfeld is qualified across multiple technical domains—including air dispersion modeling, environmental forensics, exposure reconstruction, and human-health risk assessment—and that his methodologies are reliable, scientifically grounded, and helpful to the trier of fact.
